

ASIM ASLAH P M

AI Full Stack Developer | Python, FastAPI, Computer Vision

+91 9207900426 | asimaslu7@gmail.com | Palakkad, Kerala, India | linkedin.com/in/asim-aslah-pm-05906a222 | github.com/AsimAslah

PROFESSIONAL SUMMARY

M.Tech candidate in Artificial Intelligence and Data Science who builds AI-powered web applications end to end. Built an image-to-3D platform during a product internship at Realviz LLP: TripoSR (PyTorch) inference behind a FastAPI backend, Supabase storage, browser-based 3D preview and iPhone AR testing. Developed DataVeil, a local-first privacy tool that masks and restores sensitive text, documents and images using Presidio, spaCy, YOLOv8 and BiSeNet. Seeking AI full-stack developer roles.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, Java, C

Backend & Web: FastAPI, REST APIs, Supabase, Gradio, HTML, CSS

AI/ML & Computer Vision: PyTorch, Machine Learning, Computer Vision, Object Detection, Semantic Segmentation, YOLO, Segment Anything Model (SAM), BiSeNet, TripoSR, OpenCV, Neural Networks, Anomaly Detection, Time-Series Forecasting

NLP: Named Entity Recognition, spaCy, Presidio

Data: NumPy, Pandas, Matplotlib

Security & Privacy: Data Anonymization, Cryptography (AES-256)

Testing & Tools: pytest, Git, GitHub

CS Fundamentals: Data Structures, Algorithms, Object-Oriented Programming

EXPERIENCE

Intern | Realviz LLP (Brickrat) | Malappuram, Kerala | Jun 2026 – Jul 2026

- Built an AI-powered web application that converts a single 2D image into downloadable OBJ and GLB 3D models using TripoSR (PyTorch), running on CPU-compatible hardware (github.com/AsimAslah/Image-to-3D).
- Developed the FastAPI backend covering image upload, model inference, 3D file generation and asset download, extending an initial Gradio prototype into a full web application.
- Integrated Supabase to persist generated-model metadata and asset file URLs for storage and retrieval.
- Implemented browser-based 3D previews for generated OBJ and GLB assets using JavaScript-based rendering.
- Enabled iPhone AR viewing through Quick Look and tested the end-to-end workflow across multiple devices using a temporary public tunnel to the locally hosted app.

PROJECTS

DataVeil: Local Privacy-Preserving Masking for Text, Documents and Images | Python, FastAPI, Presidio, spaCy, YOLOv8, OpenCV, BiSeNet | Jun 2026 – Present | github.com/AsimAslah/Dataveil

- Developed a local-first FastAPI web application with a browser UI that masks sensitive data before it is shared with external generative-AI tools, then restores it afterward. Processing runs entirely on the user's machine and stores no uploads.
- Built text and document anonymization for pasted text, PDF, DOCX and PPTX using Presidio and spaCy to detect names, emails, phone numbers, organizations and Indian identifiers such as Aadhaar-like numbers and PIN codes, with per-occurrence review and reversible placeholders.
- Implemented image masking that combines YOLOv8 person segmentation, OpenCV face localization and BiSeNet face parsing, with eight selectable effects including blur, pixelate, mosaic and silhouette.
- Designed recovery-kit restoration that saves only the protected pixels and masks, then maps them onto the AI-returned image using ORB/ECC alignment, without re-running segmentation.
- Structured the app as two FastAPI routers on a single Uvicorn server and wrote a pytest suite covering both interfaces, every image effect, text restoration and image recovery.

Security and Forecasting Energy Distribution System | Python, AES-256, Time-Series Forecasting | May 2024

- Developed a Python prototype that encrypts consumer energy data with AES-256 and forecasts short- and long-term demand to support power-distribution planning.

AI Virtual Keyboard | Python, OpenCV | Aug 2023

- Built a real-time virtual keyboard using live webcam input, hand tracking and finger-gesture recognition for touch-free text entry.

M.Tech Coursework Projects | 2025 – Present

- Completed applied projects in CIFAR-10 image classification, neural-network and statistical intrusion detection, SVD-based anomaly detection, and CBOW (Word2Vec) embeddings.

EDUCATION

Master of Technology, Artificial Intelligence and Data Science | 2025 – Present

Government Engineering College Palakkad

Relevant coursework: Machine Learning, Computer Vision, Pattern Recognition, Statistics for Data Scientists, Computational Intelligence, Optimization

Bachelor of Technology, Computer Science and Engineering | 2020 – 2024

MES College of Engineering
